

Challenge

The core business of Poole & Shaffery includes representing clients in civil litigation matters such as business, environmental, employment, intellectual property, and real property litigation. A solid IT plan was needed due to their recent expansion and to keep up with their rate of growth. Poole & Shaffery was in need of a plan that ensured data security and integrity, as well as access to technical support for any future issues.

Solution

Wildcat Technology Solutions' proposed IT plan gave Poole & Shaffery the foundation they needed to build a solid IT infrastructure. Their offices needed to be interconnected so that information was accessible from any location. With standardized desktops, remote access, reliable email, central data storage, anti-virus protection, and a working backup action plan, Poole & Shaffery can rest assured that their data is both easily accessible AND secure.

Benefit

With the data now in a centralized location, employee productivity has increased and document version control is more reliable. Increased security measures gives Poole & Shaffery peace of mind knowing that the confidential data they house is secure while giving their employees the necessary freedom to do research on the internet.
